Name: Student ID:

Agentic AI for Business and FinTech (FTEC5660)
Project Planning, Due date: 8 November, midnight.

Instructions

This is for the group project planning. One submission per group. Maximum length: 2 pages. Submission format: PDF.

(Q1) Members: indicate the name and student ID of each member. In case you are doing a solo project, please make sure that you have received the permission from the course instructor.

(Q2) Describe the project in one sentence. State the specific customer, the problem, and the intended outcome. This is a working hypothesis, not a product pitch. Example of a response: "We aim to help [customer] overcome [problem] so that [measurable outcome]."

(Q3) Who are the ideal customer profiles (ICP)? Identify one primary customer segment: the person's role, industry or organization type, relevant workflow, operating context, constraints, and the situation in which the problem occurs. Avoid broad labels such as "all students" or "all companies."

(Q4) Describe the task the customer is trying to accomplish, the point in their current workflow where the problem appears, and the outcome they need. Focus on the problem before discussing a solution.

(Q5) Identify the most important one or two pain points. How often do they occur? What is lost if the customer does nothing (time, money, risk, quality, or missed opportunity)? Where possible, estimate a measurable cost or consequence.

(Q6) Who would pay? Who approves the purchase and whose budget is used? Explain why the payer would have an incentive to spend.

(Q7) Which specific people or organizations might try an early prototype and provide frequent feedback? How can you reach them?

(Q8) What evidence shows the problem exists? You may consider interviews with target users, observed workarounds, past behavior, and time or money already spent. If evidence is missing, label the claim as an assumption.

(Q9) List up to three important alternatives. Include direct competitors and indirect substitutes: spreadsheets, manual workflows, in-house effort, agencies, legacy products, and doing nothing. Describe actual current behavior rather than hypothetical adoption of your product.

(Q10) Why would customers switch or pay? What important need remains unmet by existing alternatives? Explain what improvement would justify a change in behavior or spending. Distinguish any demonstrated willingness to pay from your own estimate.

(Q11) Why you?
